

SERVER SURVIVAL PROTOCOL – V2

The Deathly Hallows Protocol

Everything the old Horcrux page told you still applies. This adds three legendary items to the server — rarer, stronger, and worth fighting over. Tap a symbol below to jump to it.

Cloak

Stone

Sword

PART ONE

The Horcrux System

Your safety net against death. Kill a seasoned player, earn a **Horcrux**, place it, and dying costs you nothing while it stands.

Earning one

QUALIFYING KILL

Player has 30+ minutes of playtime → you receive a Horcrux item.

KILL TOO EARLY

Player under 30 minutes → the kill earns nothing.

CHARGE CAP

3 charges max, all held by **one player only** at a time.

SINGLE HOLDER LOCK

Once a player creates a Horcrux, no one else can create one until all existing Horcruxes are destroyed.

Placing it

MANUAL

Place it anytime, anywhere you like.

AUTO-PLACE

Carry it 30 minutes without placing and it drops itself under your feet.

INVENTORY = UNPROTECTED

Only a *placed* Horcrux counts as active protection.

What happens when you die

CONDITION	RESULT
1+ placed Horcrux	Respawn normally, nothing lost, charge count untouched. A 7-second cosmetic dark/smoke effect plays — visual only.
0 placed Horcruxes	3-day ban. On return: inventory, armor, ender chest, and XP are wiped.

Protecting it — and losing it

A placed Horcrux is also a target. Anyone who breaks the block — including you — destroys that charge permanently. No refund. You earn a fresh one the same way: another qualifying kill.

Only one player may hold Horcrux charges at a time (max 3). Once that player has created a Horcrux, everyone else is locked out of creating one until all of that player's Horcruxes are destroyed. Exact numbers (playtime threshold, auto-place timer, ban length) are set by server config and may shift over time. Ask staff if anything here looks out of date.

The Three Hallows

Three legendary items, each with one job and one weakness. Tap a card to see the full rundown.

Each player may hold only **1 Hallow** at a time — no stacking Sword + Cloak + Stone on one player.

Elder Sword

Unbeaten in a straight fight — as long as you're patient between swings.

1-hit kill on any target **1 min** cooldown between kills

The Elder Sword ends a fight the instant it connects — one hit is lethal to any player it strikes, armor included. That power comes with a leash: after a kill, the blade needs **1 minute** before it can do that again. Swing it outside a kill and it behaves like a normal weapon.

- **Damage:** instant kill on hit
- **Cooldown:** 1 minute after each kill before the next one-hit kill is available again
- **Best used:** to open a fight, not to spam through a group — the cooldown will catch you

Invisibility Cloak

Worn, not wielded. Vanish for as long as an hour at a time.

No armor required to wear it **1 hour** full invisibility **1 min** cooldown

Equip the cloak in your chestplate slot and you go fully invisible — not just hard to see, gone from view entirely — for up to **one hour** per activation. It only equips if you have **no other armor piece** worn — helmet, leggings, and boots slots must be empty. Once it runs out or you remove it, it needs a short rest.

- **How to activate:** wear it in the chest armor slot — only works if no other armor piece is worn
- **Duration:** up to 1 hour of full invisibility per use
- **Cooldown:** 1 minute before it can be worn again after coming off

Resurrection Stone

A totem you keep — as long as you're holding it when it matters.

Works like a **totem** **Reusable**, not one-time Must be **in hand** **20s** cooldown after use

The Resurrection Stone saves you from a killing blow the same way a totem of undying does — but it isn't consumed. It only triggers if it's the item in your hand at the moment of death. On trigger, it sends a message to server chat announcing the save, and needs **20 seconds** before it can save you again.

- **Trigger condition:** must be held in your main hand when the killing blow lands
- **Uses:** not consumed on use — stays in your inventory after saving you
- **Broadcast:** triggering sends a message to server chat announcing the save
- **Cooldown:** 20 seconds after each save before it can trigger again

Horcrux items are named in a bold, non-italic white-to-purple gradient. Each Hallow gets its own gradient — gold for the Sword, cream for the Cloak, red for the Stone — so you can identify an item's family at a glance, even in a crowded hotbar.

PART THREE

Spawn & Compass Tracking

The Hallows don't sit in a shop — they drop into the world at random, and the whole server hunts for them together.

Starting a run

An operator runs `/dhs` . All three Hallows spawn at random locations on the map, and every player immediately receives a tracking compass.

The compass doesn't hand you everything at once — it reveals one artifact's location per week, so early finders don't just sweep the board. Once an item is **picked up**, its compass goes permanently dead — it never repoints to whoever's holding it, so it can't be used to hunt down and stalk a player.

Reveal order

WEEK 1	●Invisibility Cloak
WEEK 2	●Resurrection Stone
WEEK 3	●Elder Sword

How the compass works

Right-click to use it.

ACTIVE WINDOW

Points toward the current artifact for **10 seconds** per use — until that item is found, then it goes dead for good.

COOLDOWN

Needs **30 seconds** to recharge before it can be used again.

idle — ready to use

Commands

COMMAND	WHAT IT DOES
<code>/horcrux</code>	Check your own placed/carried Horcrux counts.

`/horcrux <player>`

Check another player's Horcrux counts.

`/dhs`

Operator command. Spawns the three Hallows and hands every player a tracking compass.

HORCRUX & DEATHLY HALLOWS PROTOCOL · SERVER RULES REFERENCE

Numbers here follow current server config and may be adjusted by admins. Ask staff if anything looks out of date.
